Basic SEO

Common Keywords

A list of keywords that appear frequently in the text of your content.

Here are the most common keywords we found on the page:

error jhipster chat install start version want build client command

SEO Description

SEO analysis of your page's meta-description.

-  The meta description is 188 characters long. Most search engines truncate descriptions longer than 160 characters. Agathos empowers ministries and missions with tools and services for donor and volunteer engagement, event and project management — mobilising believers to serve the least, last, and lost.

Write a meta-description for your page. Use your target keyword(s) (in a natural way) and write with human readers in mind. Summarize the content - describe the topics your article discusses.

The description should stimulate reader interest and get them to click on the article. Think of it as a mini-advert for your content.

H1 Heading

SEO Analysis of the H1 Tags on your page.

-  One H1 tag was found on the page.

An error has occurred :- (

H2 Headings

SEO analysis of the H2 headings on your page.

-  One or more H2 tags were found on the page.

Usual error causes

Building the client side code again

Getting more help

Image ALT Attributes

SEO analysis of the "alt" attribute for image tags.

No images found on the page

Keywords in Title & Description

SEO analysis of the HTML page's Title and meta description content.

No common keywords found in the page title and the description.

You need to use titles and descriptions that are attractive to users and contain your keywords. Use the keywords naturally - keyword stuffing is usually detected and will result in a lower ranking. What's more, it's pretty off-putting for potential readers, who are more likely to click on an appealing link.

Links Ratio

SEO analysis of the ratio of internal links to external links.

There are one or more issues with the number of links on this page:
No internal links found.

internal: 0

external: 4

Add links to external resources that are useful for your readers. Make sure you link to high-quality sites - Google penalizes pages that link to "spammy" sites (ones that break the Google webmaster guidelines).

Ideally, the links should be highly relevant to the subject you're writing about. It's impossible to cover every aspect of a subject on a single page, but your readers may be fascinated by some detail you barely touch on. If you link to a resource where they can learn more, they'll be grateful. What's more, you'll be rewarded with higher rankings!

SEO Title

SEO analysis of the HTML title of the page.

The page title has 64 characters, which is good.

Agathos - Rallying Christians to Serve the Communities Around Us

Create a responsive site

Our analysis of the use of CSS media queries in your content.

The CSS code contains **media queries**.

Media query found in <https://agathos.be/content/css/loading.css>.

Homepage Is Reachable

Tests if your homepage is reachable by making an HTTP request.

Homepage is reachable

Advanced SEO

Search Preview

Here is how the site may appear in search results:

Agathos - Rallying Christians to Serve the Communities Around Us

<https://agathos.be>

Agathos empowers ministries and missions with tools and services for donor and volunteer engagement, event and project management — mobilising believers to serve the least, last, and lost.

Canonical Tag

Does the content have a "canonical" URL?

No canonical link tag found on the page.

null

Every page on your site should have a <link> tag with a "rel='canonical'" attribute. The link tag should go inside the page's head tag, and it should contain the page's "correct" URL.

If you've republished an article from another source (such as another site or a different section of your own site) then you need to pick which URL is the "correct" one and use that.

The Rank Math WordPress plugin makes it very easy to set the canonical URL for every page of your site.

Noindex Meta

Does the content contain a noindex robots meta tag?

The page does not contain any **index** meta tag or header.

Mobile Search Preview

Here is how the site may appear in search results on a mobile device:

Agathos - Rallying Christians to Serve the Communities Around Us

<https://agathos.be>

Agathos empowers ministries and missions with tools and services for donor and volunteer engagement, event and project management — mobilising believers to serve the least, last, and lost.

Mobile Snapshot

A snapshot of how your content appears on a mobile device.

WWW Canonicalization

Does the site appear on more than one URL?

The www and non-www versions of the URL are not redirected to the same site.

Decide whether you want your site's URLs to include a "www", or if you prefer a plain domain name. There are for each choice, but neither one is better or worse for SEO purposes - as long as you're consistent.

You should use HTTP redirections (301 permanant redirects) to pass PageRank from the "wrong" URLs to the standard (canonical) ones. That way, your content will still benefit from backlinks if someone makes a mistake and uses the wrong URL.

OpenGraph Meta

Does your site use OpenGraph meta tags?

Opengraph meta tags have been found.

Schema Meta Data

Does the content include relevant Schema.org metadata?

No Schema.org data found on the page.

The Rank Math WordPress plugin makes it extremely easy to add highly relevant Schema.org markup to your site. It has a simple graphical interface, so you don't have to get your hands dirty with complex HTML markup.

Sitemaps

Does the site use an XML sitemap?

The site has one or more sitemaps.

Robots.txt

Does your site have a valid robots.txt file

The site has a robots.txt file which includes one or more **Disallow:** directives. Make sure that you only block parts you don't want to be indexed. Try our [free robots.txt editor tool](#) to easily test and validate your robots.txt file.

Keep your content fresh

Checks for recent content updates using available signals (XML sitemap, og:updated_time, or Last-Modified header).

The content is fresh. Last updated on 2025-08-10 (48 days ago) via XML Sitemap.

Broken Links

Detects broken or dead links (404/500 errors) in the website that may harm SEO and user trust.

Some link(s) are protected by bot mitigation services.

Performance

Page Size

An analysis of the size of your HTML file.

The size of the HTML document is 2 Kb, under the average HTML size of 33 Kb.

Response Time

How fast does your server respond to requests?

The response time of the page is 1.13 seconds. It is recommended to keep it equal to or below 0.8 seconds.

The simplest and fastest fix is to use a caching plugin, like [WP Rocket](#). Caching plugins keep a cached version of each page on your site. Instead of building the page from scratch, the server will send the cached copy.

You can get an even greater speed-up with a content delivery network service. These services host a cache of your content on multiple servers spread out across the globe. A user's request is handled by the edge server that's closest to their physical location, so the content arrives very fast indeed.

Image Headers Expire

Do your images use "expires" headers?

No local images found on the page

Minify CSS

Are your CSS files properly minified?

Some CSS files don't seem to be minified.

`https://agathos.be/content/css/loading.css`

`https://agathos.be/content/main.dca9e118f384bd6f48c1.css`

CSS can add a lot of load-time to your website. Thankfully, there is an easy solution to minify CSS using WP Rocket.

Page Objects

Analysis of the embedded objects in the pages.

The page makes 3 requests.

`total: 3`

`images: 0`

`javascript: 1`

stylesheets: 2

Minify Javascript

Does the site use minified JavaScript?

Some Javascript files don't seem to be minified.

<https://agathos.be/app/main.b4b60fa77731179ee6d4.bundle.js>

JavaScript files appear in many places, including frameworks (like Bootstrap), themes and templates, and third-party plugins.

So you should track down where the culprit (un-minified) JavaScript files come from. For instance, if the un-minified JavaScript lives inside a third party plugin, you can minify it. But when you update the plugin to a new version, the JavaScript files will need to be compressed again.

There are server-side tools (including WordPress plugins) to automatically minify JavaScript files.

Mobile Speed

How fast does your website respond to mobile users?

The page performance is good across all key metrics.

Security

Theme Visibility

Theme Visibility

The theme is not publicly visible, so it is not easily identifiable.

Visible Plugins

Visible Plugins

Hurray! None of the plugins are publicly visible.

Directory Listing

Does your web server list the contents of the directories?

Directory Listing seems to be disabled on the server.

Secure Connection

Is your content served over a secure connection?

The site is using a secure transfer protocol (https).
